

## PROS OF RESCHECK SOFTWARE

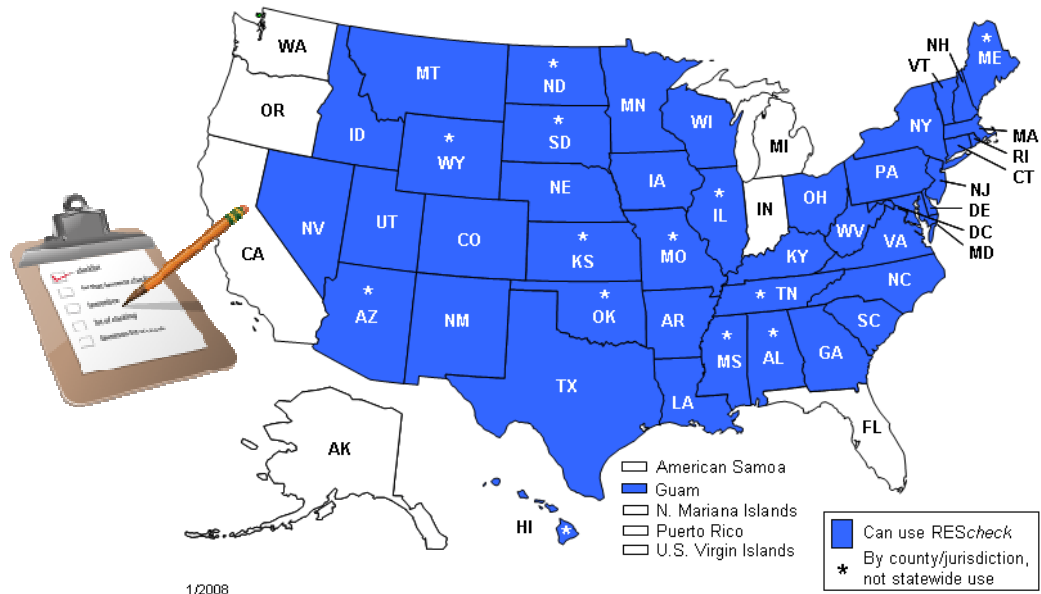

### What is REScheck software?

REScheck software is a building code program that rates a home's energy efficiency. It is widely used by designers, architects, builders, and building inspectors to determine whether new homes and additions meet requirements set forth by the Model Energy Code (MEC) or the International Energy Conservation Code (IECC). A REScheck code analysis benefits a homeowner by ensuring that the home or addition is as resourceful as possible, which in the long run can save money and help to maintain a higher property value.

### Do I need a REScheck?

REScheck is now in use by 43 states, 30 of those which legally require it statewide. You can refer to the map below to find out if your state requires the use of REScheck.
